My Passion

I find joy in bridging the gap between technical complexity and human-centric design. My growing interest in product management stems from a desire to work at the intersection of tech, innovation, and user experience—where I can contribute not only as a developer or analyst, but as a strategic thinker crafting meaningful impact.

Deep Tech   Innovation

Product

User Experience

I'm passionate about building things that matter. Things that don't just exist, but solve, simplify, and scale.
